Wealth Accounting *and the* Valuation of Ecosystem Services

WAVES is a global partnership that aims to promote sustainable development by ensuring that natural resources are mainstreamed in development planning and national economic accounts. [Learn More](#)

Indian officials launch work on forest accounts to capture forests' contribution to economic growth in mountainous Himachal Pradesh. Photo: © World Bank / Curt Carnemark

Dear Colleagues,

In the last few days, we have seen several world leaders effectively make the economic case for natural resources. These remarks have been very encouraging for us working on Natural Capital Accounting (NCA) and show a global momentum building on the issue.

At the [Economist's World Oceans Summit](#) in California, **Prince Charles of Wales** called on ocean industries and politicians to support the ocean's "Blue Economy" by "*aligning financial capital with maintenance of natural capital.*"

In a [prime time television appearance in Australia](#), **International Monetary Fund Managing Director Christine Lagarde** was asked if GDP goes far enough to measure the long-term viability of a national economy. Lagarde responded that although GDP is a recognized and established accounting system for countries, it is not sufficient, does not account for externalities and "*does not account for the damage that we do to the environment.*" She suggested the use of a combined,

alternative system that takes into account "those not-accounted-for goods that have no tradable values and yet that have a very significant value."

Our efforts to implement NCA at a country/ecosystem level continue. **WAVES Senior Environmental Economist, Urvashi Narain, writes about a shift taking place** to reposition forests as an integral component to economic growth in the Indian state of Himachal Pradesh. This was apparent at a workshop earlier this month to launch the work on ecosystem valuation in the Indian state of Himachal Pradesh.

In Australia, a course on environmental accounting -- the first of its type jointly organized by a statistical office and an academic institution -- was attended by almost two dozen participants from Indonesia, the Philippines, Vietnam and Australia and designed to support the WAVES initiative.

The framework that guides our work in implementing NCA in countries, the System of Environmental-Economic Accounts, was adopted by all countries in 2012. The official version was published this month and translations in several languages will be available soon.

Please keep us posted on your work, or other examples of NCA in action!

Thanks, the WAVES Team

Notes from the Field: High in the Himalayas, a Commitment to Capture Forests' Value

WAVES Senior Environmental Economist, Urvashi Narain, writes about a shift taking place in an Indian state to re-position forests as an integral component to economic growth.

Blog: Reverse the Curse - Transforming Resource- Driven Economies

Nearly 70% of people living in poverty are in countries whose economies are driven by their endowment of resources such as oil, gas, and minerals. The author proposes a "resource tiger" model, centered on three imperatives.

Course on Environmental Accounting Takes Off

Twenty two people from four countries attended the course run by the Australian Bureau of Statistics and the Australian National University.

Official Publication of the UN SEEA Central Framework Released

The System of Environmental-Economic Accounts (SEEA) Central Framework, adopted by the UN Statistical Commission in 2012, provides the internationally-agreed standards for producing comparable statistics on the environment and its relationship with the economy.

WAVES Voices

"We need new strategies for forests. We need strategies for building economies without degrading forests. We need to re-position forests as integral to the economic growth of a state. We need to plant trees, to also cut them. We need, quite literally, to make money on our forest wealth. But we need to learn how to make money without destroying the forests."
